

1.CO1	Represent -67 with -75 in 11 bits using 2's complement system. (You don't need to show the conversions)
2.CO1	Ronaldo's career earning is $(11101100100001101.11)_2$ dollars, while Messi's career earning is $(177761)_9$ dollars. Kylian Mbappe started his career five years ago and has been earning $(1124)_7$ dollars per match for the last five years, playing $(143)_5$ matches each year. If he continues to earn at the same rate—that is, $(1124)_7$ dollars per match and $(143)_5$ matches per year—how many additional years will Mbappe need to surpass the combined total earnings of Ronaldo and Messi? (Show the answer in decimal, show the conversions)
3.CO1	Divide $(1112311)_4$ by $(112)_4$ using base 4. Find the quotient and remainder. Note: You must show the necessary calculations. You don't need to show the conversions.

Solution

$$\begin{array}{ll}
 \begin{array}{l}
 1. \quad 67 = 1000011 \\
 +67 = 01000011 \\
 +67 \text{ in 11 bits} = 00001000011 \\
 -67 \text{ in 11 bits} = 11110111100+1 = \\
 \hline
 \mathbf{11110111101}
 \end{array}
 &
 \begin{array}{l}
 75 = 1001011 \\
 +75 = 01001011 \\
 +75 \text{ in 11 bits} = 00001001011 \\
 -75 \text{ in 11 bits} = 11110110100+1 = \\
 \hline
 \mathbf{11110110101}
 \end{array}
 \end{array}$$

$$\begin{array}{l}
 2. \quad \text{Ronaldo} = (11101100100001101.11)_2 = 121101.75 \text{ dollars} \\
 \text{Messi} = (177761)_9 = 110701 \text{ dollars} \\
 \text{Combined} = 121101.75 + 110701 = 231802.75 \text{ dollars}
 \end{array}$$

$$\begin{array}{l}
 \text{Mbappé per match} = (1124)_7 = 410 \text{ dollars} \\
 \text{Matches per year} = (143)_5 = 48 \\
 \text{Yearly} = 410 \times 48 = 19680 \text{ dollars} \\
 \text{5 years} = 19680 \times 5 = 98400 \text{ dollars}
 \end{array}$$

$$\begin{array}{l}
 \text{Needed} = 231802.75 - 98400 = 133402.75 \\
 \text{Each year} = 19680 \rightarrow 133402.75 \div 19680 \approx 6.78 \\
 \text{Additional years} = 7
 \end{array}$$

$$\begin{array}{r}
